Kynar 500® Standard Colors	24	50,000	35 Years	AZ50	121#	\$330.75	\$318.00	\$318.00

See current SBS Color Chart for available Standard Colors.

Kynar 500® is a registered trademark of ELF Atochem • GALVALUME® is a registered trademark of BIEC International Inc.

PANEL PRICING:

- All panel pricing is based on net coverage.
- For short lengths add \$4.00 per panel for panels 3' – 2'-9" or \$2.50 per panel for panels 2'-10" – 5'-11" (Panels less than 6'-0" cannot be prepunched and notched).
- The TS-324 panels must be mechanically seamed to complete installation. Seaming machines for this panel are available for rental at www.schulteseamers.com and are financial responsibility of the renting party.
- TS-324 panel is manufactured in Hockley, TX and Hueytown, AL.

PACKAGING COST:

- Maximum 18 sheets per bundle.
- Standard packaging: Block and Band — 8'-0" O.C.with strippable film (on color panels only) on the male and female rib
- Export or LTD packaging Please inquire:

NOTES:

- All panels are factory notched and pre-punched both ends.
- All panels have factory applied sealant.
- Panels over 52'-0" or under 6'-0" Please inquire.
- Yield strength is 50,000 PSI on 24 gauge panels.
- Oil-Canning is not a cause for rejection.

4. Yield strength is 50,000 PSI on 24 gauge panels.
5. Oil-Canning is not a cause for rejection.

PANEL INFORMATION

HOW TO CALCULATE SQUARES OF PANELS:

One square = 100 square feet of panels. Both TS-324 and VS-216 squares are calculated based on actual panel coverage to weather.

For TS-324 panels, the coverage is 2'-0". Simply add all of the LFT of TS-324 panels required, multiply by 2 - then divide by 100.

For example, if there are 40 panels @ 42'-0" long, there would be a total panel LFT of 1,680. Multiplying that by 2 = 3,360 square feet of coverage. Dividing that by 100 = 33.6 squares.

For VS-216 panels, the coverage is 1'-4" or 1.33'. Simply add all of the LFT of VS-216 panels required, multiply by 1.33 - then divide by 100.

For example, if there are 40 panels @ 42'-0" long, there would be a total panel LFT of 1,680. Multiplying that by 1.33 = 2,234.4 square feet of coverage. Dividing that by 100 = 22.344 squares.

PANEL PRODUCT INFORMATION:

1. Clear Acrylic-Coated GALVALUME®:
 - a. Clear Acrylic-Coated GALVALUME® incorporates a thin, non-warranted clear acrylic film intended to increase its resistance to fingerprinting and handling marks during the erection process as well as eliminating the need for using oil in the forming process. This clear acrylic film could discolor during the weathering process. This is not a cause for rejection.
 - b. Clear Acrylic-Coated GALVALUME®'s metallic coating spangle appearance and shade could vary from coil-to-coil and may be noticeable during or after erection or during the weathering process. This is not a cause for rejection.
 - c. Neither of the aforementioned aesthetic issues diminish the structural integrity nor affect the limited panel warranty. If a consistent appearance is a priority, SBS recommends that pre-painted panels be used in lieu of Clear Acrylic-Coated GALVALUME®
2. Painted Finish Panels:
 - a. The top coat paint thickness is a nominal 1.0 mils (+/- 0.2 mils) inclusive of the primer.
 - b. The off-white backer coat paint thickness is a nominal 0.5 mils (+/- 0.1 mils) inclusive of the primer.
3. All panels have a length tolerance of plus or minus 1/4" from ordered length.
4. Maximum panel length is 52'-0". Longer lengths are possible but may require a higher cost, permitted delivery. Please inquire.

PANEL PERFORMANCE WARNINGS

The building panels are manufactured to the highest quality standards, offering long-term durability and performance. To assure optimum panel performance, special precautions must be taken while the panels are in a packaged state. Please take notice of the followings WARNINGS to insure that your panels are properly protected prior to installation and installed properly. Failure to follow these recommendations could void any panel warranty.

A. JOBSITE STORAGE

1. All building panels are extremely vulnerable to finish deterioration from moisture when in the nested, packaged condition. Long term storage of these panels (over 30 days) in the nested, packaged condition can be detrimental and may void the panel finish warranty. Erect panels immediately upon receipt for best results.
2. Moisture can form between dry panels from temperature changes alone. This can happen even when kept undercover, out of the elements, and especially in winter. It is very important to install all panels as soon as possible.
3. Job site storage is the responsibility of the buyer and should always include tarping and the elevation of one end of every panel package to aid in the draining of any moisture that may accumulate between panels. Panels should always be stored above rising water levels.
4. Panels with evidence of water stain, paint blistering or other defects attributed to improper or long term field storage will not be eligible for claim.

B. INSTALLATION

1. All metal shavings or iron filings created during the erection process by drilling holes, cutting, or sawing must be swept off of the roof and wall panels daily. Failure to do so may cause permanent rust stains on the painted surface. Claims will not be accepted for this problem.
2. Cutting of panels or trim with circular saws is strongly discouraged. The fine metal particles created are hot and will embed themselves into any painted surface they contact. Removal of all of these particles is nearly impossible and will cause rust spots on the painted surfaces. This problem occurs most when cutting endwall panels to slope or cutting around wall openings. Claims will not be accepted for this problem.
3. Never cut the blanket insulation off even with the edge of the panels as this will cause "wicking" of moisture and will promote panel rust. Always fold back the insulation, with facing outward, at least 1" away from the panel edge.
4. All panels should be installed in accordance with the SBS Installation & Seaming Guides, available on www.sbsp.com, for the specific TS-324 or VS-216 panel, as applicable.

PANEL INFORMATION

PANEL INSTALLATION SAFETY WARNINGS

1. These panels should be installed by a qualified professional that is knowledgeable with the proper installation of metal building panels and the safety precautions required.
2. Never install panels without wearing a tied-off safety harness and/or using a safety net as required by OSHA.
3. Painted panels are coated with a wax to protect the painted surface during shipment. All panels should be viewed as extremely slippery, even if dry.
4. Never install or walk on wet building panels. Panels become extremely slippery when wet and could cause slippage or injury.
5. Take extreme care when walking on panels early in the morning as morning dew could be present and cause panels to be extremely slippery.
6. Never install panels in inclement weather (i.e. ice, snow, rain, lightning, etc.) as slippage or injury could occur.
7. All sloped roofs are dangerous. Be extremely careful when working on any sloped roof to avoid slipping or loss of balance.
8. Never install panels on windy days. Installers may be subject to injury if wind gusts cause them to lose their balance while carrying panels.
9. Be extremely careful installing panels (or any other steel or metal items) near electrical lines as these panels or items will conduct electricity and could cause electrocution.
10. Never walk on the top panel of an unsecured package of panels. The top panel will slide easily and may cause a fall and/or injury.
11. Never leave a bundle of panels unsecured on the sloped roof of a structure. The panels could slide off the roof like a "deck-of-cards" causing injury to those on the ground.
12. Always handle panels with care as all panel edges are sharp and can easily cause injury. Whenever possible, use gloves when handling.

DELIVERY:

All SBS stocked trim colors and gauges (See Page SSR-15 for available trim color selections) Approximately 3 to 5 Working Days

SPECIAL TRIM PRICING

FORMULA FOR PRICING SPECIAL TRIM

Use the following formula to calculate the Price Per Foot of Trim:

Girth of Material x Price per Inch of Girth + Price per Number of Breaks

Price per Inch of Girth	- 26 Gauge (GALVALUME)	~ \$0.24
	- 26 Gauge (SMP COLOR)	~ \$0.32
	- 26 Gauge (KYNAR COLOR)	~ \$0.37 (See Page SSR-15 for Limited Color Selections)
	- 24 Gauge (GALVALUME)	~ \$0.27
	- 24 Gauge (SMP COLOR)	~ \$0.36
	- 24 Gauge (KYNAR COLOR)	~ \$0.43
	- 22 Gauge (GALVALUME)	~ \$0.42
Price per Break (Hem equals two breaks)		~ \$0.14

1. All trim to be 26 gauge material unless noted otherwise on customer drawing or sketch.
2. Customer drawing or sketch of special trim must be in our possession for order to be processed.
3. Specify the side with the finish color.
4. If more than one special trim is required, number each piece SF1, SF2, SF3, etc.
5. Tapered trim requirements: \$25.00 Set-Up charge per section - NO EXCEPTIONS. Drawings must be furnished by customer and be "shop ready".
6. 5'-0 minimum length will be charged.

SEAM TYPES

TS-324 TRIPLELOK™ SEAM

The TripleLok Seam requires preliminary seaming of the roof panel with the manual TripleLok seaming tool at the starting eave and/or ridge end of the roof panel, at every clip and at the endlaps followed by seaming the full length of the roof panels with the motor seaming machine, except endlaps. Endlaps are to be hand seamed only.

The motor seaming machine must be fitted with the TripleLok seaming rolls.

VS-216 TRIPLELOK™ SEAM

The TripleLok Seam requires preliminary seaming of the roof panel with the manual TripleLok seaming tool at the starting eave and/or ridge end of the roof panel, at every clip and at the endlaps followed by seaming the full length of the roof panels with the motor seaming machine, except endlaps. Endlaps are to be hand seamed only.

The motor seaming machine must be fitted with the TripleLok seaming rolls.

TS-324 QUADLOK™ SEAM

The QuadLok Seam requires that the roof panels be previously TripleLok machine seamed. The QuadLok Seam requires additional manual seaming of the roof panel with the manual QuadLok seaming tool at the starting eave and/or ridge end of the roof panel and at the endlaps followed by seaming the full length of the roof panels with the motor seaming machine, except endlaps. Endlaps are to be hand seamed only.

The motor seaming machine must be fitted with the QuadLok Seaming rolls.

VS-216 QUADLOK™ SEAM

The QuadLok Seam requires that the roof panels be previously TripleLok machine seamed. The QuadLok Seam requires additional manual seaming of the roof panel with the manual QuadLok seaming tool at the starting eave and/or ridge end of the roof panel and at the endlaps followed by seaming the full length of the roof panels with the motor seaming machine, except endlaps. Endlaps are to be hand seamed only.

The motor seaming machine must be fitted with the QuadLok Seaming rolls.

Manual hand seaming tools are available for purchase on Page SSR-10
Seaming machines are available for rental at www.schulteseamers.com and are financial responsibility of the renting party.
